Profile

I'm a long-time programmer in the process of switching to the startup ecosystem. With that I'm also looking for a change in focus, to growth, marketing and data analysis - key components to the execution of a startup.

My technical background helps me to rapidly understand how things work and how to efficiently use them, and perhaps even automate some of the processes around them. It also allows me to have fluent technical conversations and work closely with relevant team members for things like integrations or tests.

I take a wholistic view in decision-making and pay great attention to detail. I'm excited by opportunities to adapt (like I'm trying to do now) and love to think things through. I have a good mix of spontaneity and precision, I think.

Experience

Bill's Spills; Freelance — 2015-ongoing

Pragmatic, high-quality and lasting solutions to a variety of problems. Cross-platform and full-stack website/app engineering.

Cloud Computing Tutor & TA, University of Sydney — 2016-2017

Teaching classes of Master's students data science and cloud computing and assisting in management of a unit of study. Complements my research.

Software Engineer, amaysim; Sydney — 2015-2016

Incredible colleagues and working culture. Real-world challenges of a growing company and their journey to technical maturity.

Lead Developer, Thinkun; Sydney — 2012-2015

Architecture, team leading and development with app and web technologies.

Education

University of Sydney,

Master of Philosophy (Computer Science/Bioinformatics) — 2015-ongoing

Comparing modern dataflow engines' usability. Ask me about my research.

University of Sydney,

Bachelor of Computer Science and Technology (Advanced) — 2011-2013

Completed as many CS courses as I could, loved it - that's what I was there for.
